Assembly Member Cecilia M. Aguiar-Curry,  
Chair of the Local Government Committee  
1020 N Street, Room 157  
Sacramento, California 95814

RE: SB 649 Wireless and Small Cell Telecommunications Facilities (amended)

**Oppose**

Dear Assembly Member Cecilia M. Aguiar-Curry,

EMF Safety Network (EMFSN)<sup>1</sup> and Ecological Options Network (EON)<sup>2</sup> respectfully oppose SB 649 regarding wireless telecommunications facilities. SB 649 eliminates local zoning authority, conflicts with Federal laws, and increases harmful wireless radiation (RFR). *SB 649 abandons the public to trust the wireless industry to certify safety and compliance with Federal law. Only a careful local government process can ensure FCC compliance.*

**1) SB 649 eliminates local authority**

SB 649 will allow a ministerial permit for antenna siting for the majority of local governments. This over the counter permit will gift multiple companies unlimited access to deploy unlimited antennas. Local authority is needed to ensure community safety and welfare<sup>3</sup>, and compliance with Federal laws<sup>4</sup>. SB 649 would overturn a recent California court case where San Francisco won the right to determine antenna placement. The court discussed in detail and ruled Public Utilities Codes 7901 and 7901.1 did not limit a city's right to design review.<sup>5</sup> SB 649 conflicts with California Public Utilities Commission (CPUC) no and low cost EMF avoidance policy<sup>6</sup> adopted in 1993. In 2006 the CPUC upheld the policy, which included RFR.<sup>7</sup>

## 2). SB 649 conflicts with Federal laws

Federal Telecommunications Act of 1996 preserves local zoning authority, and requires compliance with environmental laws and wireless radiation (RFR) safety rules. SB 649 over the counter permit conflicts with RFR compliance required by Federal Law.

According to the Federal Communications Commission (FCC<sup>8</sup>):

- *“Building a new tower or collocating an antenna on an existing structure requires compliance with the Commission’s rules for environmental review. These rules ensure that licensees and registrants take appropriate measures to protect environmental and historic resources, and that the agency meets its obligations under the National Environmental Policy Act (NEPA) to consider the potential environmental impact of its actions, as well as under other environmental statutes such as the National Historic Preservation Act (NHPA) and the Endangered Species Act (ESA).”*
- “NEPA requires agencies to consider and disclose the environmental effects of its actions to improve decision-making and encourage transparency, public participation, and accountability. Effects are defined broadly to include ecological, aesthetic, historic, social, and cumulative and indirect effects.”
- *“Collocations, including Distributed Antenna Systems (DAS) and Small Cells, may also require compliance with these same processes.”*
- “Section 332(c)(7) of the Communications Act preserves state and local authority over zoning and land use decisions for personal wireless service facilities, but sets forth specific limitations on that authority.” Specifically, a state or local government may not unreasonably discriminate among providers of functionally equivalent services, may not regulate in a manner that prohibits or has the effect of prohibiting the provision of personal wireless services, must act on applications within a reasonable period of time, and must make any denial of an application in writing supported by substantial evidence in a written record. The statute also preempts local decisions premised directly or indirectly on the environmental effects of radio frequency (RF) emissions, assuming that the provider is in compliance with the Commission's RF rules.”

The fact that these antennas are called “small” does not mean they comply with FCC regulations. The FCC calculates RFR by what the public’s exposure levels are, including frequencies, radiated power, and distance.

For example:

- *What frequencies will be used?*
- *What is the radiated power at the source?*
- *How many antennas are in one enclosure?*
- *What is the exposure level at ground level? at 20 feet? at 100 feet?*
- *What is the existing cumulative RFR exposure level at ground level? at 20 feet? at 100 feet?*
- *Is the ground flat or falling? If not, what are the exposure levels at what height and distance?*
- *What is the future colocation RFR exposure?*

SB 649 also conflicts with Federal law (Section 6409) which exempts cities from antenna modifications on city property.<sup>9</sup>

### **3) SB 649 increases harmful wireless radiation to humans and nature.**

International independent scientists are calling for immediate measures to reduce RFR. Peer reviewed, published science shows RFR poses serious health and safety risks to the public and nature. Children are more vulnerable.

- 224 scientists have signed the International EMF Scientist Appeal: *“We are scientists engaged in the study of biological and health effects of non-ionizing electromagnetic fields (EMF). Based upon peer-reviewed, published research, we have serious concerns regarding the ubiquitous and increasing exposure to EMF generated by electric and wireless devices. These include—but are not limited to—radiofrequency radiation (RFR) emitting devices, such as cellular and cordless phones and their base stations, Wi-Fi, broadcast antennas, smart meters, and baby monitors as well as electric devices and infra-structures used in the delivery of electricity that generate extremely-low frequency electromagnetic field (ELF EMF).”* *“Effects include increased cancer risk, cellular stress, increase in harmful free radicals, genetic damages, structural and functional changes of the reproductive*

*system, learning and memory deficits, neurological disorders, and negative impacts on general well-being in humans.”*<sup>10</sup> Scientists quotes:

- *“Based upon epidemiological studies there is consistent evidence of increased risk for brain tumors (glioma and acoustic neuroma) associated with use of wireless phones.” Lennart Hardell, MD, PhD University Hospital, Orebro, Sweden*
- *“The harmful effects of electromagnetic fields, regardless of their frequencies, are now scientifically settled. Pregnant women (the fetus) and children and adolescents are particularly vulnerable.”- Dominique Belpomme, MD, MPH, Paris V Descartes University, European Cancer & Environment Research institute.*
- *“Migratory birds -- incredibly important to the global economy and for the ecological services they provide -- now appear to be negatively affected by non-ionizing radiation.” Dr. Albert Manville, Adjunct Professor, Johns Hopkins University; Senior Wildlife Biologist, U.S. Fish & Wildlife Service (FWS), Emeritus/Retired*
- The National Toxicology Program published a 25 million dollar study which is one of the largest and most comprehensive studies on cell phone radiation and cancer. In the study the rats exposed to cell phone radiation developed two types of cancers, glioma, a brain tumor, and schwannoma, a tumor in the heart. The summary includes, *“Given the widespread global usage of mobile communications among users of all ages, even a very small increase in the incidence of disease resulting from exposure to RFR could have broad implications for public health.”*<sup>11</sup>
- The BioInitiative Report updated in 2012, prepared by 29 authors from ten countries, reviewed 1800 studies and conclude, *“EMF and RFR are preventable toxic exposures. We have the knowledge and means to save global populations from multi-generational adverse health consequences by reducing both ELF and RFR exposures. Proactive and immediate measures to reduce unnecessary EMF exposures will lower disease burden and rates of premature death.”*<sup>12</sup>
- The International Agency for Research on Cancer at the World Health Organization classifies wireless as a 2B (possible) carcinogen.<sup>13</sup>

**Peer reviewed published studies show proximity to antennas is hazardous.**

Neurobehavioral effects among inhabitants around mobile phone base stations “*The prevalence of neuropsychiatric complaints as headache (23.5%), memory changes (28.2%), dizziness (18.8%), tremors (9.4%), depressive symptoms (21.7%), and sleep disturbance (23.5%) were significantly higher among exposed inhabitants than controls...*”<sup>14</sup>

- Epidemiological Evidence for a Health Risk from Mobile Phone Base Stations “*We found that eight of the 10 studies reported increased prevalence of adverse neurobehavioral symptoms or cancer in populations living at distances < 500 meters from base stations.*”<sup>15</sup>

**Future cell tower plans are for 5G which emits millimeter waves.** Peer reviewed published science shows millimeter waves penetrate the skin and affect human health.<sup>16</sup> Millimeter wave technology has been developed as a crowd control weapon which causes acute burning pain, as if the body is on fire.<sup>17</sup>

- An analysis of studies on millimeter waves (MMWs) “State of knowledge on biological effects at 40–60 GHz”<sup>18</sup> states, “*At the cellular level, it stands out from the literature that skin nerve endings are probably the main targets of MMWs and the possible starting point of numerous biological effects.*” Effects reviewed include effects on capillaries and nerve endings, protein insults, epigenetic regulation, and the risk of homeostasis disruption, which would have dramatic consequences.

**Peer reviewed published studies show RFR harms nature.**

- The US Department of the Interior states wireless radiation threatens birds, and they criticize the FCC’s radiation safety guidelines stating, “*the electromagnetic radiation standards used by the Federal Communications Commission (FCC) continue to be based on thermal heating, a criterion now nearly 30 years out of date and inapplicable today.*” Two hundred forty one bird species are at mortality risk from both tower collisions and from exposure to the radiation towers emit. This includes birds that are endangered or threatened, Birds of Conservation Concern, migratory birds, and eagles. Studies of radiation impacts on wild birds documented nest abandonment, plumage deterioration and death. Birds studied included

House Sparrows, White Storks, Collared Doves, and other species. Studies in laboratories of chick embryos documented heart attacks and death.<sup>19</sup>

- Scientists in Germany studied tree damage in relation to electromagnetic radiation from 2006-2015. They monitored, observed and photographed unusual or unexplainable tree damage, and measured the radiation the trees were exposed too. *“The aim of this study was to verify whether there is a connection between unusual (generally unilateral) tree damage and radiofrequency exposure.”* They found significant differences between the damaged side of a tree facing a phone mast and the opposite side, as well as differences between the exposed side of damaged trees and all other groups of trees in both sides. They found no tree damage in low radiation areas. The scientists concluded, *“Statistical analysis demonstrated that electromagnetic radiation from mobile phone masts is harmful for trees.”*<sup>20</sup>
- Studies show insects are harmed by radiation: Food collection and response to pheromones in an ant species exposed to electromagnetic radiation found exposure to radiation caused colony deterioration and affected social insects’ behavior and physiology.<sup>21</sup> Oxidative and genotoxic effects of 900 MHz electromagnetic fields in the earthworm concluded radiation caused genotoxic effects and DNA damage in earthworms<sup>22</sup>.
- Mobile Phone Induced Honey Bee Worker Piping. The study abstract states, *“The worldwide maintenance of the honeybee has major ecological, economic, and political implications.”* Cell phone RFR was tested for potential effects on honeybee behavior. Handsets were placed in the close vicinity of honeybees and the sound made by the bees was recorded and analyzed. The information revealed that active cell phone handsets induced the bees worker piping signal. *“In natural conditions, worker piping either announces the swarming process of the bee colony or is a signal of a disturbed bee colony.”*

### **Current FCC guidelines do not protect public health, safety or environment.**

The FCC has not updated its wireless exposure guidelines since 1996. In 2013 EMFSN submitted comments on FCC proceedings 13-84 and 03-137 which remain incomplete by the FCC. Meanwhile there has been an explosion of wireless devices in homes

across America, and forced deployment of radiation on the general population. This rampant wireless explosion is set to get much worse with 5G millimeter wave deployment, Internet of Things, Smart Cities, and radar in all new cars.

The federal government has taken sole responsibility for the radiation safety of personal wireless service deployment,<sup>23</sup> despite this, no federal agency is acting responsibly, or taking accountability for protecting the public and the environment from the health effects of radiation exposure.

The FCC is criticized by investigative journalist Norm Alster in a report published by Harvard University. Captured agency: How the Federal Communications Commission is dominated by the industries it presumably regulates.<sup>24</sup> Alster calls on the FCC to acknowledge there may be wireless health risks, to back off wi-fi promotion, to acknowledge children and pregnant women may be more vulnerable and more. He writes, *“Personally, I don’t believe that just because something can be done it should heedlessly be allowed. Murder, rape and Ponzi schemes are all doable but subject to prohibition and regulation. Government regulators have the responsibility to examine the consequences of new technologies and act to at least contain some of the worst. Beyond legislators and regulators, public outrage and the courts can also play a role but these can be muffled indefinitely by misinformation and bullying.”*

***SB 649 is an unnecessary gift to the wireless industry. A bill to address RFR health impacts is needed!***
